

More than a new product introduction,
a window reinvention.

Introducing new casement, awning and direct set windows that are better in every way.

Casement

Awning

Direct Set

Sometimes things just come together beautifully. Our brand new window line is the assembly of the finest qualities, performance characteristics and sustainable manufacturing considerations of every window that came before. We think you'll agree, it's the highest level of craftsmanship available today.

A close-up photograph of a wooden casement window frame. The wood is a light, natural color with a visible grain. A black, modern-style handle is mounted on the lower part of the frame. The window is set against a dark blue background. The lighting is dramatic, highlighting the texture of the wood and the sleek lines of the handle.

New casement windows
with a new standard.

Cleaner, stronger lines

Wide and narrow profiles available

New accessories including new exterior trim profiles

Unequaled PG50 structural performance

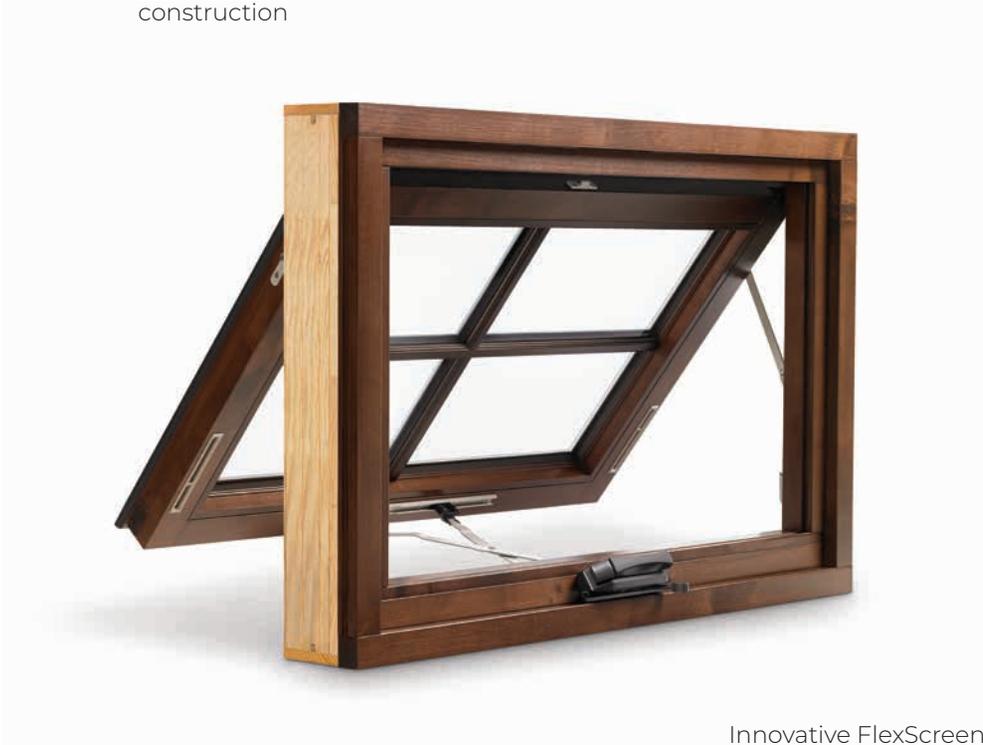

While elevating our own high quality expectations for our casement windows, we've raised the bar for all casements and created a new standard with immaculate lines and design characteristics that are truly unbeatable, and truly sustainable.

Awning windows for the
perfect pairing.

Beefy 2 ¼" wood sash
construction

Innovative FlexScreens

Dual or triple pane insulated glass for
unrivaled thermal performance

Our popular awning windows have been upgraded as well, one of the many benefits of a consolidated product line. It also makes window pairing absolutely perfect.

Two profiles, endless flexibility.

Narrow or Wide

Narrow or Wide

Our new awning and casement windows come in either wide or narrow sash and trim profiles, giving you the added flexibility often needed to bring harmony to demanding design approaches.

Direct set with an
elegant reset.

Full suite of shapes in
angular and radius

Consolidated lines
for effortless pairing
and matching

Available in narrow profile only (which we think you'll agree is ideal), our newly conceived direct set windows offer many shapes to work with, including countless custom ideas. They also match perfectly with nearly any multiple window configuration you have in mind.

A close-up photograph of a window frame. The window is partially open, revealing a wooden sash. The sash is constructed from light-colored wood and is mounted on a black frame. The wood sash is overbuilt, meaning it extends beyond the black frame. The background is a solid blue color.

Wood sash overbuilt
to over deliver.

Our sashes have been re-engineered with industry-leading 2 1/4" wood construction. The extra reinforcement helps deliver even better thermal performance. It also helps our windows last longer, a sustainability story unto itself.

New hardware with
a hidden secret.

The new operating handle with magnetic capture features a hidden locking mechanism pioneered by our engineers. No visible lock on the window stiles and a handle that's always neatly in place give these new windows stunning vertical lines.

A close-up photograph of a window frame. The interior side of the frame is finished with a light-colored wood grain. The exterior side is a dark, metallic blue color. The window is set into a wall of the same dark blue color. The lighting is dramatic, highlighting the textures and colors of the materials.

More exterior trim profiles,
to match more exteriors.

Conventional Profiles

A200 1-5/16" Brickmould

A201 1-5/16" Flat Casing

A202 1-3/4" Ovalo

A203 3-1/2" Brickmould

A204 3-1/2" Beaded Brickmould

A205 3-1/2" Flat Casing

A400 1" Sill Nosing

A401 2-1/8" Sill Nosing

A402 2-1/4" Historic Sill Nosing

Easy Trim

2" Brickmould

Ovalo Brickmould

2" Flat Casing

3-1/2" Flat Casing

Sill Nosing

Exterior trim profiles have been expanded to include Conventional and Easy Trim options with accompanying brickmould and sill nosing. Our Easy Trim is remarkably simple, snapping in place with a clip system with no through-frame anchors.

Outside colors
that last.

cladding samples.

Same nature-inspired premium finishes you've come to expect, featuring our earth friendly AAMA 2605 powder-coatings to last longer and lower environmental impact.

Inside colors and accents add the finishing touch.

Ultra Coat

Ultra Stain

Interior Woods

Interior Trim

Ultra Coat and Ultra Stain finishes are a meticulous and advanced process to ensure maximum beauty of your wood window and door interiors. Yet, wood is a natural material with character, color and grain patterns with varying densities, even in lumber taken from the same tree. Colors and stain absorption will vary widely based on the wood's natural character; therefore, results are not guaranteed by Sierra Pacific Windows for color or grain consistency. While not always necessary, finish touch up in the field should be expected.

Innovative FlexScreen and our View Clear screen mesh options create more ways to tailor these new windows to specific needs. Same goes for our carefully curated selection of decorative glass.

Low-E 366

Cardinal's triple layer silver product for superior performance. 95% UV protection provides comfort without compromising visibility. Solar heat gain coefficient of 0.27.* Also available with Preserve® protective film or with Preserve and Neat™ coating for a naturally cleaner glass. ***

Low-E 366 with i89 Coating**

The same superior performance as regular Low-E 366, but with the addition of i89 coating on the interior surface to increase insulating value reflecting heat back into the room. Meets even the most extreme requirements in the majority of the Canadian Energy Star zones. Also available with Preserve® and Neat™ coating. ***

Low-E 340

It has an amazingly low 0.18* solar heat gain coefficient to keep out the heat even in the blazing sun. Slightly tinted. Blocks 98% of UV rays. Less heat gain when it's hot, less heat loss when it's cold, and the best glare control under the sun. Also available with Preserve® protective film.***

Low-E 180 Passive Solar

A very high (0.68) coefficient for capturing solar heat gain. Ideal for reducing your heating bills in colder climates. Superior insulation value blocks cold and keeps in the heat. Also available with Preserve® protective film. ***

Low-E 180 Passive Solar with i89 Coating***

The same superior performance as regular Low-E 180, but with the addition of i89 coating on the interior surface to increase insulating value. Meets even the most extreme requirements in the majority of the Canadian Energy Star zones. Also available with Preserve® protective film. ***

Standard Low-E

Insulated for improved energy efficiency. Providing comfort while reducing solar heat gain and blocking harmful UV rays.

Triple Insulated Glass

Three panes of glass comprised of any combination of Low-E coatings to meet the most stringent energy performance needs. Also available with Preserve® and Neat™ coating.

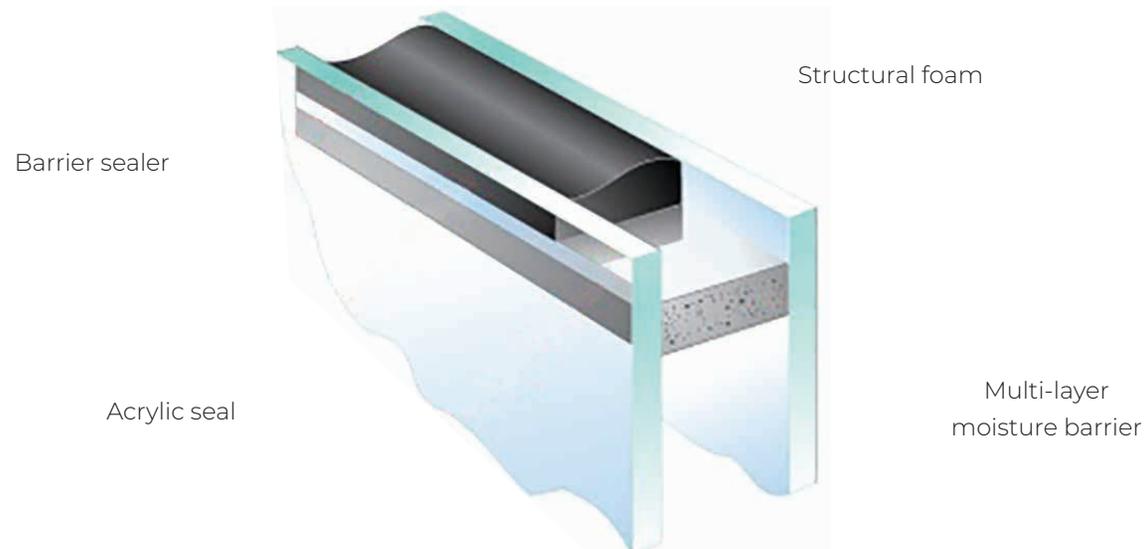

Sound Control

Reduces outside noise by as much as 50% while blocking 99% of damaging UV rays. Laminated for shatter resistance. Available insulated. Triple pane or varying lite thicknesses can also provide smart sound control solutions.

*All values shown are center of glass. **Interior surface coatings, also known as surface #4, are applied to the interior (room-side surface) of a dual pane insulated glass unit, resulting in improved thermal performance and lower heating demands. Because the coating reflects heat back into the room, the room-side pane of glass will be slightly colder in winter, causing a higher potential for interior condensation. ***Available when selecting XL Edge Spacer.

Performance all the way to the edges.

Quanex warm edge spacer

Patented No-Metal TrueWarm® Edge spacers remain part of our distinct thermal performance advantage, as does the ability to choose the exact type of insulated glass right for specific environments.

More than the best windows and doors.

As we work to build world-class products, we continue to reduce our impact on the environment in multiple ways. Every year, millions of seedlings are grown in our nurseries and planted in our woodlands as a renewable wood supply for our mills. This self-reliance is part of our mission to become better stewards of our planet for future generations.

Committed to stewardship.

Sierra Pacific Windows is part of Sierra Pacific Industries, which owns nearly 2.5 million acres of forestland in California, Washington and Oregon. Thanks to advancements in sustained yield forest management and timber harvesting, we will nearly triple the amount of wood growing on our lands in the next 100 years.
